EXP - 2

AIM

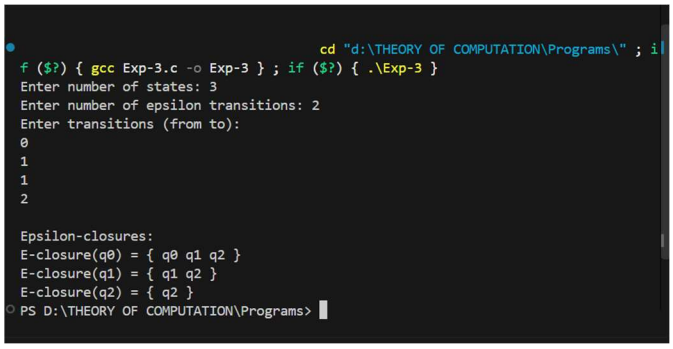

To write a C program to find the ε-closure of all states in a Non-Deterministic Finite Automaton (NFA) with ε-moves.

ALGORITHM

1. Start the program.
2. Read the number of states and ε-transitions.
3. Read the ε-transitions between states.
4. For each state, initialize its ε-closure with the state itself.
5. Find all states reachable through ε-transitions, including indirect transitions.
6. Display the ε-closure of each state.
7. Stop the program.

SAMPLE INPUT & OUTPUT:

1.

RESULT

The C program successfully calculates and displays the ε-closure of every state in an NFA containing ε-transitions.
